X. RESEARCH WORK

During my training in Pathology, I examined a large number of macroscopic and microscopic materials derived from surgical procedures, autopsies and biopsies. In addition, I performed a large number of frozen section procedures and I was taught the application of histochemical and immunohistochemical techniques. I was also trained in the method of fluorescent in situ hybridization (FISH) for detection of numerical, chromosomal and gene abnormalities in cases of breast carcinomas. During my master in University of Staffordshire, England, I was fully trained and gained experience in various laboratory molecular techniques such as immunodiffusion, immunoelectrophoresis, nephelometry, indirect immunofluorescence, ELISA and immunoblot method.

Moreover during 2011-2013, I was trained in molecular biology techniques (DNA isolation, RNA isolation, isolation microRNA, PCR, real time PCR, High Resolution Melting Analysis (HRMA), Cloning, cell cultures) at the Interdisciplinary Laboratory of Molecular Oncology Centre, Biobank Cancer, Ioannina University, I also participated regularly and actively in scientific and research activities of the laboratory. Director Evangelos Briasoulis (Reference Letter)

I have participated in the scientific program entitled "New functional foods with beneficial health effects containing bioactive essential oils from Greek endemic plants." I worked extensively with immunohistochemical techniques, during my training, my thesis and I apply them extensively in the private laboratory where I work.

XI. FUNDING RESEARCH PROGRAMS
